Correction to: Supportive Care in Cancer

<https://doi.org/10.1007/s00520-022-06855-4>

Following publication of the original article [1], the authors identified minor errors in the Methods section (sub-section: Measures). The original publication read as follows (emphasis added to highlight area corrected):

“A total score of 12–35, 36–61, and 62–84 indicate a low, moderate, and high level of disability acceptance, respectively.”

This sentence has been adjusted as follows:

“A total score of 12–35, 36–60, and 61–84 indicate a low, moderate, and high level of perceived social support, respectively.”

The correction does not have any effect on the final conclusions of the paper.

The original article has been corrected.
