This splendid work is a handbook of the principal surgical accesses of the spine intended to the young surgeons and for the teams of nurses of operating rooms. Each intervention is described with per-operational photographs of the principal stages, diagrams, per-operational radiographies in certain cases. At the end of each intervention, a table points out the complications that can occur and the means of curing it, as well as councils of bibliographical reading.

Should be on the shelves of each resident or intern who intends themselves for the surgery of the spine.

Compliance with ethical standards

Conflict of interest The author declares that he has no competing interests.
