Abstract

In October 2018, the order *Mononegavirales* was amended by the establishment of three new families and three new genera, abolishment of two genera, and creation of 28 novel species. This article presents the updated taxonomy of the order *Mononegavirales* as now accepted by the International Committee on Taxonomy of Viruses (ICTV).

Introduction

The virus order *Mononegavirales* was established in 1991 to accommodate related viruses with nonsegmented, linear, single-stranded, negative-sense RNA genomes classified into three families [12, 13]. According to the previous ratification vote held in March, 2018, the order included eight families [7]. Amended/emended order descriptions were published in 1995 [4], 1997 [14], 2000 [15], 2005 [16], 2011 [5], 2016 [1], 2017 [2], and March 2018 [3]. Here, we present the changes that were proposed via an official ICTV taxonomic proposal (TaxoProp 2017.016M.A.v1. Mononegavirales_rev) at <http://www.ictvonline.org/> in 2017 and were accepted by the ICTV Executive Committee (EC) in October 2018. These changes are now part of the official ICTV taxonomy as of October 2018.

Taxonomic changes at the order rank

In October 2018, the order *Mononegavirales* was expanded by three families. The family *Artoviridae* was created for the established genus *Peropuvirus* (moved out of *Nyamiviridae*) and six new species for Běihǎi barnacle virus 8 (BhBV-8), Běihǎi rhabdo-like virus 1 (BhRLV-1), Běihǎi rhabdo-like virus 2 (BhRLV-2), Húběi rhabdo-like virus 5 (HbRLV-5), Húběi rhabdo-like virus 6 (HbRLV-6), and Húběi rhabdo-like virus 8 (HbRLV-8), all discovered in invertebrates [8, 17]. The family *Lispiviridae* was established for inclusion of the floating genus *Arlivirus*; the novel species *Hubei arlivirus*, *Odonate arlivirus*, and *Wuchang arlivirus* for Húběi rhabdo-like virus 3 (HbRLV-3), Húběi odonate virus 10 (HbOV-10), and Wūchāng romanomermis nematode virus 2 (WcRNV-2) discovered in invertebrates; and the (renamed) species of the now abandoned free-floating genera *Chengtivirus* and *Wast-rivirus* [8, 17]. The family *Xinmoviridae* was established for the floating genus *Anphevirus*, and six novel species were added to the genus for Bolahun virus (BLHV), *Drosophila unispina virus* 1 (DuniV-1), Húběi diptera virus 11 (HbDV-11), Húběi orthoptera virus 5 (HbOV-5), Húběi rhabdo-like virus 7 (HbRLV-7), and Shuāngào fly virus 2 (SgFV-2) discovered in invertebrates [6, 8, 9, 17].

Taxonomic changes at the family rank

Bornaviridae

In October 2018, no changes were made at the family rank.

Filoviridae

In October 2018, no changes were made at the family rank.

Mymonaviridae

In October 2018, six new species were added to the genus *Sclerotimonavirus* for Húběi rhabdo-like virus 4 (HbRLV-4), *Sclerotinia sclerotiorum* negative-stranded RNA virus 4 (SsNSRV-4), soybean leaf-associated negative-stranded RNA virus 1 (SLaNSRV-1), soybean leaf-associated negative-stranded RNA virus 2 (SLaNSRV-2), soybean leaf-associated negative-stranded RNA virus 3 (SLaNSRV-3), and soybean leaf-associated negative-stranded RNA virus 4 (SLaNSRV-4) associated with soybean leaves, invertebrates, and fungi [10, 11, 17].

Nyamiviridae

In October 2018, the free-floating genus *Crustavirus* was included in the family, and two novel species were added to that genus for Běihǎi rhabdo-like virus 6 (BhRLV-6) and Wēnlǐng crustacean virus 12 (WICV-12) discovered in invertebrates. One genus, *Peropuvirus*, was moved from the family into the new family *Artoviridae*. Finally, the family was expanded by three novel genera that include a total of five new species for Běihǎi rhabdo-like virus 3 (BhRLV-3), Běihǎi rhabdo-like virus 4 (BhRLV-4), Běihǎi rhabdo-like virus 5 (BhRLV-5), Orinoco virus (ONCV), and Wēnzhōu tapeworm virus 1 (WzTWV-1) discovered in invertebrates [8, 17].

Paramyxoviridae

In October 2018, no changes were made at the family rank.

Pneumoviridae

In October 2018, no changes were made at the family rank.

Rhabdoviridae

In October 2018, no changes were made at the family rank.

Sunviridae

In October 2018, no changes were made at the family rank.

¹Includes Newcastle disease virus (NDV) and pigeon paramyxovirus 1 (PPMV-1)

²synonym: GH-M74a virus, Kumasi virus (KV)

³synonym: murine parainfluenza virus 1

⁴synonym: bat paramyxovirus

⁵synonym: simian virus 5

⁶synonym: porcine rubulavirus

⁷synonyms: avian pneumovirus, turkey rhinotracheitis virus

⁸synonym: wild boar rhabdovirus 1 (WBRV1)

⁹synonyms: Egtved virus, Paralichthys olivaceus rhabdovirus

¹⁰synonym: tobacco stunt virus

[¶]Please note that viruses are real objects that are assigned to concepts that are called taxa. Species, genera, families, and orders are taxa. Taxon names are always italicized and always begin with a capital letter. Virus names, on the other hand, are not italicized and are not capitalized, except if the name or a name component is a proper noun. This column lists the virus names with their correct (lack of) capitalization. Lists of viruses within a given species are provisional at this point and will likely be amended in the near future

Summary

A summary of the current, ICTV-accepted taxonomy of the order *Mononegavirales* is presented in Table 1.
