

## **Eunethydis 1st international ADHD conference: from data to best clinical practice**

**26th–28th May 2010, Amsterdam, The Netherlands**

© Springer-Verlag 2010

The purpose of the conference was to inform and discuss how far the neuroscience of ADHD has come in recent years and how this science will undoubtedly influence our evidenced-based practice, now and in the future. The conference welcomed internationally renowned speakers to address this exciting topic, and other related topics of high scientific and clinical interest in ADHD. It was a privilege to have this impressive faculty, with their wealth of global experience and expertise in ADHD, sharing their work with us at the conference. Also, young talent presented their new ideas which will undoubtedly shape our thinking further in the years to come.

In addition to the main conference programme, we were proud to have over 200 posters presented demonstrating the volume of research activity and evidence-based clinical practice in this scientific field. In the tradition of

Eunethydis, the conference provided opportunity to meet new colleagues in order to further develop a more integrated approach to the research and management of ADHD.

We wish to thank all who participated in the conference for their insightful and valued contributions.

Every best wish,

Eunethydis Conference Scientific Programme Committee

*Professor Joseph Sergeant, The Netherlands (Chairman)*

*Professor Tobias Banaschewski, Germany*

*Dr David Coghill, UK*

*Professor Edmund Sonuga-Barke, UK/Belgium*

*Professor Eric Taylor, UK*

*Professor Alessandro Zuddas, Italy*
