Fig. 4 Autophagy status of HUVECs after exposure to LLLI (a). Laser irradiation could promote autophagy response by increasing LC3-II/I and reducing P62 levels in HUVECs at a dose of 80 J/cm². Measurement of mitochondrial membrane potential ($\Delta\Psi$) using Rhodamine 123 (b). Real-time PCR analysis of Optineurin and PINK1 (c). Data showed the normal expression of these genes during LLLI. One-way ANOVA with Tukey's post hoc test. ** $p < 0.01$; *** $p < 0.001$; **** $p < 0.0001$
