In appendix F of [1] we gave a collection of all the formulas needed to calculate the power correction to the jet broadenings. Equation F.15, for the Milan factor \mathcal{M} , was based on the results of [2], which subsequent to the work of [3] was found to contain an error [4, 5]. The corrected form of equation F.15 should read

$$\mathcal{M} = 1 + \beta_0^{-1} (1.575C_A - 0.104n_f) = 1.490 (1.430) \quad \text{for } n_f = 3 (0). \quad (\text{F.15})$$

Acknowledgements

We wish to thank Mrinal Dasgupta, Lorenzo Magnea and Graham Smye (the authors of [3]) for discussions about their results prior to publication, and Bryan Webber for discussions which helped locate the error in [2].
