Table 2 Feral cats fitted with GPS collars to monitor mortality and activity before, during and after the Eradicat® baiting programme at Taunton National Park (Scientific) in July–August 2017. Age—A: adult, SA: sub-adult. NA—not available. Dark shading indicates that cat died for reasons unrelated to baiting prior to the commencement

of the pre-baiting monitoring period (<2 July 2017) and therefore was not alive during the current study. Light shading indicates cat mostly remained within baiting exclusion zones or outside the study area during the 14 days following bait deployment and therefore was highly unlikely to be exposed to Eradicat® baits

Cat ID	Sex	Age	Date captured & collared	Capture method	Weight	Exposed to baits	Date died	Days after baiting	1080 positive	Colour in Fig. 2b
01	M	SA	24/5/2017	Elevated foot-hold	2.98	No	23/06/2017			
02	M	A	24/5/2017	Elevated foot-hold	4.28	Yes	Survived			Red
