**Lijun Zhou** is currently a PhD student in the State Institute of Agricultural Engineering and Bioenergy at the University of Hohenheim, Germany, since November 2016. After the completion of the Master in Sustainable Water Management in Sweden in October 2012, she worked for 4 years in the agricultural and renewable energy sector in China for international financed projects. The main objective of her PhD is to establish a biogas plant measurement program in China which can fit the Chinese situation and needs, based on the methodology derived from the German Biogas Measurement Program III, so that she can make a comprehensive comparison study on full-scale agricultural biogas plant operation performance in Germany and China, from the technical, policy and financial aspects.
