Erratum to: J Public Health (2016) 24:253–261
DOI 10.1007/s10389-016-0719-6

The original article contains an error in the following paragraph (page 258, column 1, paragraph 2):

Among the psychosocial professionals, 26 % ($n = 5$) considered values to have no influence on the counselling session; 47 % ($n = 9$) saw values as somewhat influential, 21 % ($n = 4$) estimated the influence rather high, and one person (5 %) considered values to have a very high influence on the counselling.

The corrected version should be:

Among the psychosocial professionals, no one considered values to have no influence at all on the counselling session; 26 % ($n = 5$) viewed values as somewhat not influential on the counselling session, 47 % ($n = 9$) saw values as somewhat influential, 21 % ($n = 4$) estimated the influence rather high, and one person (5 %) considered values to have a very high influence on the counselling.
