

## **ERRATUM**

There is a misprint in the paper “PGV-1500 steam generators. New problems and solutions” by Yu. G. Dragunov, B. I. Lukasevich, N. B. Trunov, et al., published in the December 2005 issue of this journal (Vol. 99, No. 6, Russian pages 416–425). On Russian page 421, the second sentence of the first paragraph should read as follows: “As the authors note, even though sludge accumulates, vertical steam generators are used in nuclear power plants with PWR because such steam generators require less area and smaller construction volumes [3].”
