
ERRATUM

To the article “Preventive Efficacy of Oxidized Dextran and Pathomorphological Processes in Mouse Lungs in Avian Influenza A/H5N1” by O. V. Potapova, V. A. Shkurupiy, T. V. Sharkova, A. V. Troitskiy, N. G. Lusgina, and A. M. Shestopalov, Vol. 150, No. 6, pp. 707-710, April, 2010

In this article the summary was incorrectly translated. The following is the correct text:

Oxidized dextran (60 kDa) exerted a pronounced preventive effect in laboratory mice infected with avian influenza subtype H5N1 A/Goose/Krasnoozerskoye/627/05 virus, which manifested in a significant increase in mouse lifetime (by 24.4%) and a decrease in mortality rate (3.3-fold). This was probably related to significant alleviation of pathological changes in the lungs and severity of hemodynamic and inflammatory complications and early fibrosis.

Also the Figure 1 should look like the following:
