Errors in Table 3 in the on-line version of this paper were inadvertently introduced. The corrected table is as follows:

Table 3 Model fit comparisons: IQ, Inattention, Impulsivity, and Reading

Model	Fit statistics			Compared with specified model			
	–2LL	df	AIC	Model	χ^2	df	<i>p</i>
1. Saturated/means	31588.19	4504	–31.61	–	–	–	–
2. Cholesky decomposition; sexes unequal	31678.72	4624	–149.47	1	90.53	120	0.98
3. Cholesky decomposition; sexes equal	31704.08	4654	–184.11	1	115.89	150	0.98
4. One independent pathway; sexes equal	31711.46	4660	–188.73	1	123.27	156	0.98
5. Two independent pathways; sexes equal	31704.11	4648	–172.08	1	115.92	144	0.96
6. One common factor; sexes equal	31724.51	4667	–189.68	1	136.32	163	0.94
				7	10.48	17	0.88
7. Two common factors; sexes equal; forced loadings	31714.03	4650	–166.16	1	125.84	146	0.89

Note: The most parsimonious model is indicated in **boldface** type
