Fig. 3 Parthenium invasion of different land types in the three districts of Bhutan (a = Punakha, b = Tsirang, and c = Wangdue); Ranking scale: 1 = least common, 2 = less common, 3 = somewhat common, 4 = common, and 5 = most common

Fig. 4 MaxEnt generated parthenium weed distribution model for the current climate based on the species presence-only data IPCC's bioclimatic variables

Fig. 5 Projected distribution of parthenium weed in the study site: (a) under the future, and (b) spatial changes under RCP2.6 and RCP8.5 emission scenarios of IPCC over 2070

In the introduction section, one reference after the sentence “The reasons for choosing these districts were: (1)...China and India, respectively” that read as “(NSSC and PPD, Ppd, 2011)” should read as “(NSSC and PPD 2011)”
