Erratum to: Biodivers Conserv DOI 10.1007/s10531-012-0312-4

Unfortunately, some details regarding the statistical tests are not available in the original publication of the article. The complete data is given below. The authors apologize for these mistakes.

Data analysis

- For PCA the patch size was in ha, Log_{10} transformed.

Results

Table 1

Kruskal–Wallis $d.f. = 7$

- Elevation was compared using the altitude in five selected points across each fragment and reference area; these included the highest and the lowest elevations.

- For vegetation structure the number of Gentry's transects established in every fragment and reference area ranged from five to seven. For consistency we used five randomly selected transects in analyses.

Amphibian and reptile abundance comparison between sites

Both ANOVAs: $F_{7,88}$
