Correction to: Brain Topography

<https://link.springer.com/article/https://doi.org/10.1007/s10548-023-00988-3>

After the article was published online, the authors noticed inadvertent errors in the “Results and Discussion” section:

1. Under the subheading “Intercorrelations Between Microstate Occurrences”, the average correlation coefficient $r = .221$ should be negative: $r = -.221$.

The correct sentence reads as follows:

“However, the occurrence of microstate C was negatively related to the occurrence of all other microstate types (average $r = -.221$), indicating that microstate C occurrence has a competing relationship with the occurrence of all other microstate types and a special role within prototypical microstate types.”

2. Under the subheading “Intercorrelations Between Microstate Contributions”, the average correlation coefficient $r = .279$ should be negative: $r = -.279$.

The correct sentence reads as follows:

“We found mainly negative correlations (average $r = -.279$; see Fig. 1C), a sensible result given that a higher contribution of any microstate type leaves less time left in the EEG that could be covered by another type.”
