When I was informed about the transition to LREV, I was happy to join as Associate Editor for MT because I believe my experience will help broaden the scope of the journal and help high-quality papers on all areas of MT to be published in the journal. I've been active in the MT journal both as a reviewer as well as a guest co-editor of special issues. My main experience is MT, also connected with other NLP sub-fields such as challenges related to user-generated content, text simplification, or gender bias in NLP.

As Associate Editor in LREV, I particularly look forward to receiving diverse submissions: papers from researchers, developers as well as from users; papers focussed on MT as well papers about other NLP tasks related to MT and multilinguality.

Special issues on diverse topics of interest in MT will continue to appear, too. The first one to come will be looked after by Helena Moniz and Andre Martins covering everything about Translation Platforms: how they are developed, how they provide services, how they interact with the distinct translation players.

A number of reviewers from the MT journal has already been added to the LREV board to strengthen the area and ensure that excellent quality reviews continue to be produced as part of the process, and we plan to add some more with expertise both in MT as well as in other NLP tasks.

Many thanks to Nancy Ide and Nicoletta Calzolari for their help and advice, for welcoming MT as a specialised field in LREV and me as its editor.

Finally, many thanks to Springer for continuing to support our field. As is clear from the above, we believe this is a good solution for everyone, and we encourage you all to submit your papers on MT to LREV!
