Correction to: Contemporary Family Therapy
(2019) 41:56–67
<https://doi.org/10.1007/s10591-018-9477-7>

The original version of this article unfortunately contained a vague sentence in Factor Analysis subsection under Phase 1—Results and Discussion section.

The sentence “and the reverse coded others-oriented subscale, for which the higher scores reflect lower levels of others-oriented.” need to be included for better understanding.

Thus, the complete sentence should read as follows.

The higher the scores, the greater the perceived presence of the characteristics in the total and subscales of the PSTS-17, except for the reverse coded self-doubt subscale, for which higher scores reflect lower levels of self-doubt, and

the reverse coded others-oriented subscale, for which the higher scores reflect lower levels of others-oriented.

The original article has been corrected.
