The original version of this article unfortunately contained an error in describing one of the programs discussed in the article.

This paper inaccurately conflated the two Recovery After an Initial Schizophrenia Episode (RAISE) studies: Early Treatment Program (ETP) and Implementation and Evaluation Study (IES). The paper states that IES studied the clinical intervention NAVIGATE, which was the ETP clinical intervention. In fact, IES implemented the RAISE-Connection model in New York and Maryland. Although

both are examples of Coordinated Specialty Care (CSC), they are distinct programs.

In another section of the paper, the authors stated that OnTrackNY evolved from NAVIGATE whereas it evolved from RAISE-Connection. OnTrackUSA, a development of RAISE-Connection and OnTrackNY has now provided training to in 29 states/territories.
