In the original article, Table 1 was published incorrectly in which GR2 scotopic 6th column value should be **580** instead of **880**. The correct version of Table 1 is provided in this correction.

The original article can be found online at <https://doi.org/10.1007/s10633-020-09793-w>.

Table 1 Photometric study. Grass photic stimulus intensities measured at the surface of the GFFS for the Grass (Grass-G) and LED (LED-G) stimulator; directly in line 30 cm away from the light source Grass (Grass-D) and LED (LED-D) stimulators respectively. LED intensities = stimulus intensity programmed into the recording protocol (cds/m²), Colour = colour of LED, (6500 k = white, ALL = red, green, blue). Duration in

milliseconds and scotopic (s) or photopic (p). GR1-Blue scotopic is equivalent to the ISCEV rod driven response, GR4 scotopic is equivalent to the ISCEV mixed rod/cone response, GR4 photopic is equivalent to the ISCEV single flash cone responses and the 30 Hz photopic is photopic is equivalent to the ISCEV 30 Hz
