Please note an error in the original paper by authors, it is in line 14 of the Study species subsection of Material and methods. The "20 cm" in the "...oocytes per female, and size at first sexual maturity of 20 cm (Gonçalves et al. 2013)" should be changed by "2.0 cm".

The corrected sentence is now shown below.

Despite being a fairly common species in the aquarium trade, its ecology is virtually unknown. A recent study in the Mogi Guaçu river (upper Paraná River basin) showed that Jewel tetra is a single spawner on the flooding season, with mean fecundity of 486 (± 159) oocytes per female, and size at first sexual maturity of 2.0 cm (Gonçalves et al. 2013).
