The original version of this article unfortunately contained an error.

The city “Cairo” that was included in the affiliation section should be changed to “Fayuom.” The corrected affiliation 1 is shown below.

The title “Results and Discussion” before the title “Identification of the Investigated Bacterial Consortium” was missing in the published paper. The corrected paragraph is shown below.

Results and Discussion

Identification of the investigated bacterial consortium

The bacterial consortium of BiOWiSH Aqua was identified using Biolog GEN III. The most probable identified bacterial strains were *Pediococcus acidilactici*, *Pediococcus pentosaceus*, *Lactobacillus plantarum*, and *Bacillus subtilis*. All of these identified bacterial strains are nonpathogenic bacteria. *Pediococcus acidilactici*, *Pediococcus pentosaceus*, and *Lactobacillus plantarum* are lactic acid bacteria, are Gram-positive bacteria, and have the ability to exert antagonism against other microorganisms, including enteric pathogens

(Daeschel and Klaenhammer 1985; Pritchard and Coolbear 1993; María et al. 2010). *Bacillus subtilis* is a Gram-positive bacterium, and it is one of the bacterial champions in secreted enzyme production and is used on an industrial scale by biotechnology companies (Euzéby 2008).
