**DOI 10.1007/s10750-009-9990-7**

In the above mentioned publication, the relationships for body length versus wet and dry weight should be replaced by the following equations:

$$\text{Wet weight (mg)} = 0.02482 \times \text{Length (mm)}^{2.8936} \quad (1)$$

and

$$\text{Dry weight (mg)} = 0.006482 \times \text{Length (mm)}^{2.7511} \quad (2)$$

Changes in equation coefficients do not affect any of the statistics or Fig. 3 presented in the original version of the article.

---
