For the defining equation of the arrangements $\mathcal{C} \mathcal{L}_{7}$ there is a missing variable $z$ in the last two factors. One should have:

$$
\begin{aligned}
& \mathcal{C} \mathcal{L}_{7}:\left(x^{2}+y^{2}-z^{2}\right) \cdot\left(x^{2}+y^{2}-4 z^{2}\right) \cdot(x-z) \\
& \quad\left(y+\frac{\sqrt{3}}{3} x+\frac{2 \sqrt{3}}{3} z\right) \cdot\left(y-\frac{\sqrt{3}}{3} x-\frac{2 \sqrt{3}}{3} z\right)=0 .
\end{aligned}
$$
