Table 2 Model fit indices for the direct effects, indirect effects, and the 95% confidence interval for the indirect effects

Models	Outcome variable	$\chi^2(df)$	CFI	RMSEA	SRMR	Indirect effects			
						<i>B</i>	<i>SE</i>	β	95% CI
Direct effects	Internalizing problems	7.52(10)	1.00	.00	.02				
	Externalizing problems	7.92(10)	1.00	.00	.02				
	Self-reported depression	10.68(10)	1.00	.02	.03				
Indirect effects through coercive parenting	Internalizing problems	49.77(34)	.96	.05	.03	-.11	.06	-.07	[-.28, -.02]
	Externalizing problems	55.70 (34)	.95	.06	.03	-.14	.07	-.07	[-.31, -.03]
	Self-reported depression	43.57 (33)	.96	.05	.04	-.02	.01	-.11	[-.42, -.00]

95% CI = 95% confidence intervals derived from the bias-corrected bootstrapping with 2000 iterations
