The original version of this article unfortunately contained two critical mistakes in our article.

### In the **Abstract**:

" Hierarchical multiple regression analyses showed that, at 12 months, infrequent use of appropriate mind-related comments of both parents predicted children's externalizing problems ...." 12 months should be **30 months**.

And, in the **Discussion** (page 1432):

" This study found that when both parents were low in appropriate mind-mindedness at 12 m, their child more often showed externalizing problems at 4.5 years ", 12 months should be **30 months**.

The original article has been corrected.
