Correction

Correction to: Annealing temperature-driven nearsurface crystallization with improved luminescence in self-patterned alumina films

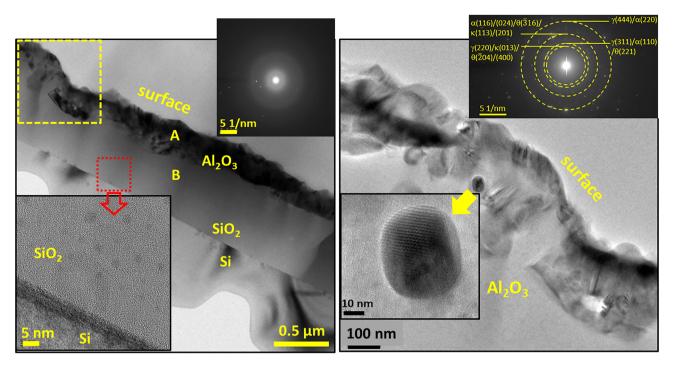

Fig. 3 Left panel displays low magnification bright-field XTEM image of A-1200. The SAED pattern corresponding to region B (top right corner inset) depicts diffuse rings, indicating an amorphous phase. The HRTEM image of the SiO_2/Si junction reveals a sharp interface (bottom left inset). Right panel exhibits a magnified image of the surface region (highlighted by a yellow box in left panel). The layer is crystalline and contains precipitates,
