Correction to: Journal of Behavioral Education
https://doi.org/10.1007/s10864-019-09344-7

The original version of this article unfortunately contained a few mistakes.

Table 1 contained three errors: Participants 3 and 14 mastered 4 and 10 programs; Participant 28 had a FSIQ change score of –4. In the results section, descriptive statistics for the C-ABA group FSIQ change scores should read (SD = 7.70, range 5–23), and effect size for the C-ABA group relative to the control group was $d = 1.65$ and the C-ABA group relative to the T-ABA group was $d = 1.08$. The post-hoc test used in the ANCOVA is the Least Significant Difference (LSD) test. These errors do not change the conclusions or interpretations presented.
