The presentation of Table 1 in the original version of this article unfortunately contained a mistake. The corrected table is given below. Springer regrets the error.

Table 1 Mean amount±SE of volatiles collected from healthy *Vicia faba* plants, plants damaged by *Lygus rugulipennis* males that had been removed, plants damaged by females that had been removed, plants damaged by males still present, plants damaged by females still present

Treatment	N	Compounds (ng/h) ^a					
		Alcohols		Alkaloids Indole	Esters		
		(Z)-3-Hexenol	1-Hexanol		(Z)-3-hexenyl acetate	Hexyl acetate	Methyl salicylate

Total duration of volatile collection was 24 h, starting at ~11.00–12.00 am

^aThe mean amount of each compound (ng/h) was estimated by comparison of peak area with that of an internal standard (dodecane, 100 ng). Numbers in column followed by the same letter indicate means that are not significantly different ($P>0.05$, ANOVA).

N number of replicates, TMTT (*E,E*)-4,8,12-trimethyl-1,3,7,11-tridecatetraene
