Fig. 6 Total amount of ergovaline ($\mu\text{g seedling}^{-1}$) of seedlings infected with *Epichloë festucae* var. *lolii* strains NEA2, and NZ_{CT} measured in seeds, seed residues, and during the early establishment phase. Error bars represent standard errors of the mean ($+ 1$ SEM). Values with the same letter are not significantly different at $\alpha < 0.05$ (Bonferroni Correction test)
