The original version of this article unfortunately contained a mistake. There is an error within Table 2. The influence of Female diagnosis of antisocial personality disorder (column 2) on Female perpetration of violence should be listed as $B = 12.41$, $SE = 5.82$, $\beta = 0.389$, $p = .033$. This is a change from a non-significant trend ($p < .10$) to a significant effect ($p < .05$). All demonstrated trends ($p < .10$) are discussed as clinically meaningful effects, and so the primary conclusions of the paper are unchanged.

The correct table is shown next page.
