

EDITORS' FOREWORD

V. V. Aleksandrov, Yu. V. Bolotin, and O. Yu. Cherkasov

UDC 531

This issue continues papers on mathematical research on problems of navigation, motion control, and biomechanics begun in previous issues of the journal “Journal of Mathematical Sciences” (2007, volume 146, issue 3 and volume 147, issue 2). This issue combines papers on the above topics, prepared on the basis of recent research results. Due to the expansion of mathematical research in the field of bionavigation and the introduction of the specialization “biomechanics” at the Faculty of Mechanics and Mathematics of Moscow State University, in this collection, as in previous editions, applied mathematical research is also directed toward this direction.
