Correction to:
Journal of Radioanalytical and Nuclear Chemistry
(2018) 318:149–155
<https://doi.org/10.1007/s10967-018-6113-9>

In the original publication, the value “ $2.361 \cdot 10^4 \text{ Bq g}^{-1}$ ” in the sentence “The final LTAC ^{233}Pa massic activity at the reference time of 27 June 2017 15:50 PDT was $2.361 \cdot 10^4 \text{ Bq g}^{-1}$ with a combined standard uncertainty of 0.33%.” under the heading “ $4\pi\beta\text{-}\gamma$ anticoincidence measurements” should be read as “ $2.632 \cdot 10^4 \text{ Bq g}^{-1}$ ”.

Also, in the original publication, the value “ $1.471 \cdot 10^{-10}$ ” in the sentence “By combining the $4\pi\beta\text{-}\gamma$ anticoincidence result with the evaluated half-life of ^{233}Pa (26.98 ± 0.02) d, and Avogadro’s number, we obtain a concentration of the

measured ^{233}Pa atom mole concentration at the reference date of $1.471 \cdot 10^{-10} \text{ mol/kg}$ with a combined standard uncertainty of 0.34%.” under the heading “Discussion” should be read as “ $1.470 \cdot 10^{-10} \text{ mol/kg}$ ”.
