Dear Readers,

Some great researchers have passed away in recent years, who made decisive contributions to the development of thermal analysis, and who also contributed considerably to the success of the now 50-year-old Journal of Thermal Analysis and Calorimetry (JTAC). We are indebted to them to a very large extent. In this issue, we are remembering them, through the words of friends and colleagues, who were close to these outstanding scientists. Accordingly, we are publishing obituaries about Michael Ewart Brown, José Manuel Criado, John Redfern, Eugen Segal and Hans-Joachim Seifert. We are also remembering Anna Langier-Kuźniarowa, about who an obituary [1] has been already published recently.

Imre Miklós Szilágyi
