Unfortunately, two paragraphs in the published version of this article contained typesetting mistakes. The corrected texts are printed below.

p. 136: $\mathcal{L}_R(\mathcal{M})$ is *faithfully* represented in both classical and quantum mechanics, with the Lie product represented by the Poisson bracket and by the commutator, and the Lie–Rinehart product represented by the symmetric (Jordan) product [1].

p. 148: and Equations (4.3) follow, by exponentiability. Finally, $\forall \Psi \in D$, the first of Equations (4.3) implies
