The original version of this article unfortunately contained an error in Equation 3. This error does not affect the results of the paper; merely the description of the model was incorrect. Both equa-

tions are nearly identical in terms of their functionality.

The correct equation is given below:

$$L_M(t) = \begin{cases} L_H + (L_L - L_H) \frac{\log_{10} M_P(t)/M_H}{\log_{10} M_L/M_H}; & \text{if } M_L \neq M_H \\ \frac{(L_L + L_H)}{2}; & \text{otherwise} \end{cases}$$
