Correction to: Pharmaceutical Research (2021).

<https://doi.org/10.1007/s11095-021-03005-z>

This correction is to update the correct corresponding author Jerome Hochman including his electronic e-mail. It is also to replace Fig. 1. and Fig. 2B with the correct figures.

Fig. 1 Schematic diagram of Liposome Click Membrane Permeability Assay (LCMPA) utilizing liposomes containing dibenzo cyclooctyne biotin (DBCO-Biotin). Azido-modified peptide are incubated with liposomes for 18 h. Peptides that permeate across liposomal bilayer are biotinylated. The biotinylated peptides are then captured with streptavidin magnetic beads and identified with LCMS based quantification.
