Correction to: Political Behavior

<https://doi.org/10.1007/s11109-019-09573-6>

The original version of this article unfortunately contains the following errors.

- In the heading “Political Participation and Civic Education”, the text “these trends tend persist” should read “these trends tend to persist”.
- In the heading “Pre-treatment Effects”, the text “In order theorize” should read “In order to theorize”.
- In Table 4, there are two incorrect signs: 0.10 should be -0.10 and 0.15 should be -0.15 . The correct Table 4 is given below.

The original article can be found online at <https://doi.org/10.1007/s11109-019-09573-6>.

Table 4 Participation gap between white youth and young people of color by condition

	Political engagement	Public voice	Cognitive engagement	Civic engagement
White/Latinx participation gap Control → Treatment (p-value)	+ 0.38 → - 0.10 (p = 0.005) → (p = 0.449)	+ 0.24 → - 0.33 (p = 0.06) → (p = 0.017)	+ 0.77 → + 0.18 (p < 0.001) → (p = 0.183)	+ 0.03 → - 0.40 (p = 0.877) → (p = 0.01834)
White/Black participation gap Control → Treatment (p-value)	+ 0.34 → + 0.019 (p = 0.014) → (p = 0.89)	+ 0.25 → - 0.15 (p = 0.062) → (p = 0.295)	+ 0.62 → + 0.39 (p < 0.001) → (p = 0.015)	- 0.005 → - 0.22 (p = 0.979) → (p = 0.227)

Table summarizes the effect of the treatment on the White/Latinx participation gap and the White/Black participation for each participatory domain. According to my theory, the treatment (critical pedagogy) should cause the participation gap between white youth and young people of color to decrease and become less statistically significant. The results presented above demonstrate that this is almost always the case

Bold text indicates instances in which young Latinxs express *significantly greater* willingness to participate than young whites
