Correction to: Sex Roles

<https://doi.org/10.1007/s11199-019-01100-5>

The authors would like to correct the errors in the texts of the original version of this article. The authors apologize for the oversight and further state that the changes made to the statements don't have an impact to the overall outcome of the study.

First, in the abstract of the article, a sentence states that "Womanism was linked to decreased disordered eating, whereas none of the feminist identity dimensions were related."

This sentence should read:

Womanism was linked to decreased disordered eating, the passive acceptance feminist identity dimension was related to

increased disordered eating, and no other feminist identity dimensions were related.

Second, in the results section, there is a sentence that reads "In support of our expectations for our second research question, passive acceptance ($b = .20$, $SE = .07$, $p = .008$) and womanism ($b = -.18$, $SE = .09$, $p = .049$) significantly predicted decreased disordered eating."

This sentence should read:

In support of our expectations for our second research question, passive acceptance significantly predicted increased disordered eating ($b = .20$, $SE = .07$, $p = .008$), whereas womanism significantly predicted decreased disordered eating ($b = -.18$, $SE = .09$, $p = .049$).

The original article has been corrected.

The online version of the original article can be found at <https://doi.org/10.1007/s11199-019-01100-5>
