During registration of specimens of *Protyrodactylus scalmophorus* and *Protyrodactylus ichthyocercus* for the Queensland Museum, it was noticed that the collection sites of the holotypes of the two species provided on the slide labels did not correspond to the published type-localities. While both species were collected from two localities within Moreton Bay as

recorded in the paper, the type-locality for each is here corrected to that reported as the “Other locality” in the respective taxonomic summaries.

The author thanks Dr Mal Bryant of the Queensland Museum for recognizing the errors and apologizes to all for any inconvenience the mistakes may cause.
