Fig. 11 Distribution of breakeven overnight installed cost for the average revenue vs. energy capacity (1 MW, 1–14MWh) of the selected nodes in the PJM RT-Market using DAM as a forecast. Assumed round trip efficiency is 70% and project lifetime is 20 years for 1 MWof rated power

Fig. 12 Distribution of breakeven overnight installed cost for the group of high potential revenue nodes in the PJM RT-Market using the DAM settlement prices as forecast, for a 1 MWof rated power ESS vs. energy

capacity (1–14 MWh) for each year between 2008 and 2014. Assumed round trip efficiency is 70% and project lifetime is 20 years

Fig. 13 Distribution of breakeven overnight installed cost for the group of intermediate potential revenue nodes in the PJM RTMarket using the DAM settlement prices as forecast, for a 1 MWh rated power ESS vs. energy capacity (1–14 MWh) for each year between 2008 and 2014. Assumed round trip efficiency is 70% and project lifetime is 20 years

The original article has been corrected.
