The Covid-19 pandemic, a dreadful thunderstorm, shows the importance, for the Public Health, of designing accurate and reliable epidemic models. The present issue is devoted to *Mathematical Modeling and Analysis in Health and Natural Sciences*. Although the decision of publishing this special issue has been taken in 2019, well before the beginning of the Covid -19 pandemic, through it we continue to support studies in mathematical epidemiology (see Volume 67, n.1, June 2018) and, more generally, studies involving applications of mathematics to multiple disciplines including ecology, medicine and population dynamics. The authors are acknowledged for their valuable papers as well as the editors for their very good work.

Prof. Salvatore Rionero
Editor in Chief
Ricerche di Matematica
