Correction to: Japanese Journal of Radiology
<https://doi.org/10.1007/s11604-021-01098-5>

In the original publication, the caption of Figure 1 and Figure 2 are interchanged. In this Correction, Figs. 1 and 2 are included with correct captions.

The original article has been corrected.

Fig. 1 The classification of the four algorithms used for pancreas segmentation in artificial intelligence

Fig. 2 Graph shows the basic principle of Dice similarity coefficient (DSC) calculation. Increasing DSC indicates increasing similarity (i.e., increasing spatial overlap) between ground truth (manual segmentation of a given object) and automated probabilistic segmenta-

tion of the same object by the artificial intelligence algorithm. In **a**, there is no overlap yielding a 0% DSC. In **b**, there is partial overlap (50%), yielding a 50% DSC. In **c**, there is complete overlap, yielding 100% DSC
