Abstract

Objective We demonstrate a surgical technique involving construction of a hepaticojejunostomy (HJ) anastomosis that ensures even spacing between the sutures regardless of the size of the common bile duct. This is demonstrated via a series of illustrations followed by live demonstration of a HJ anastomosis created during a Whipple procedure.

Video Description Overall, this technique results in the creation of a tension-free hepaticojejunostomy anastomosis, that typically does not require stenting, is highly reliable and replicable regardless of the size of the common bile duct. It is also easily reproducible and easy to teach trainees.

Keywords Hepaticojejunostomy · Bile duct anastomosis · Choledochojejunostomy

Dear Editor-in-chief,

It is our pleasure to submit our video titled “Instructional Video For Hepaticojejunostomy Anastomosis Ensuring Evenly Spaced Sutures” to the esteemed JGIS journal for consideration for publication.

This video was presented as a podium presentation at the DDW/SSAT 2023 conference in Chicago earlier this year.

In this video, we demonstrate a surgical technique involving construction of a hepaticojejunostomy (HJ) anastomosis that ensures even spacing between the sutures regardless of the size of the common bile duct. This is demonstrated via a series of illustrations followed by live demonstration of a HJ anastomosis created during a Whipple procedure.

We hope that this video contributes significantly to the existing literature as part of a high quality video demonstration.

Sincerely

Mujtaba Mubashir, MD, on behalf of Matthew Walsh, MD and the authors
