Textbox 1 How-to guide for incorporating performance assessment in transdisciplinary partnerships for sustainability

Performance assessment

Step 1. Clarify expectations: Partners must be clear on their roles and responsibilities, ensuring that each understands and agrees upon the expectations for them in the partnership as well as the results anticipated.

Step 2. Conduct baseline performance assessment: Assess performance early in the partnership (suggest end of year one) to capture the initial (baseline) state of performance and establish a benchmark.

Step 3. Reflect on baseline assessment: Data collected from performance assessment should be collaboratively examined and reflected upon in the spirit of learning. Indicators of success should be celebrated and those needing improvement carefully considered. This step initializes a shared learning process by which partners with different perspectives develop shared understanding of a problem explore solutions.

Step 4. Initiate relevant changes: Take action in partnership operations in order to address identified deficits and/or enhance areas.

Step 5. Continue to monitor performance: Repeat steps 1–4 on a regular basis. Incorporating performance assessment as part of routine monitoring enables tracking progress over time towards desired partnership performance.
