**Correction to: Obesity Surgery.**

<https://doi.org/10.1007/s11695-020-04908-3>

In the original article there is a typographical error in the Purpose section of the Abstract. The corrected version follows:

**Purpose** Physical activity, sedentary behavior, and sleep have been linked to the likelihood of maintaining healthy body weight. This study aimed to determine objectively measured movement behaviors before and up to 18 months after bariatric surgery and to investigate whether preoperative levels of these movement behaviors and potential changes of these behaviors were associated with changes in body weight and body composition.

**Publisher's Note** Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.
