Correction to: *Biologia*

<https://doi.org/10.1007/s11756-021-00805-x>

The original version of the article was published as first online in *Biologia* on 18 June 2021. Unfortunately, the original version of this article contains a mistake in the Material and Methods section (Page 3, lines 19–22 in the first section) in terms of body/tag mass ratio for insects, please find the corrected statement below:

Keywords Ground beetles · Movement trajectories · Hidden Markov models · Radio-tracking · Oak-hornbeam forests

Although tags can influence diverse aspects of a beetle's performance and such impacts remain understudied (Batsleer et al. 2020), we believe that tags used in this study did not bias beetles' movement for the duration of individual tracking. This correction stands to correct the original article.

Publisher's note Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.

The online version of the original article can be found at <https://doi.org/10.1007/s11756-021-00805-x>
