Correction to: Irish Journal of Medical Science (2020)

<https://doi.org/10.1007/s11845-020-02174-x>

The originally published version of this article contained type-setting errors in Figs. 2 and 3 legends. The correct figure legends are presented here. The original article has been corrected.

Fig. 2 Variant prioritisation. A custom MGP comprised of 282 genes was designed as part of a wider study. Quality control was performed on all called variants prior to limiting to variants in genes appearing on clinical MGPs and filtering by population frequency and prior classification

Fig. 3 Genes are annotated as follows: 1, *BRCA1/2* or functionally related to *BRCA1/2*; 2, Primary function related to DNA repair, including mismatch repair; 3, Associated with other hereditary cancer syndrome(s). Cells are coloured to indicate: black, gene was removed from 2019 version of MGP; dashed, gene was added to 2019 version of MGP; grey, gene appeared on 2015 and 2019 version of MGP

Publisher's note Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.

The online version of the original article can be found at <https://doi.org/10.1007/s11845-020-02174-x>
