The original version of this article unfortunately contained a mistake. The Figure 3 was duplicated in the position of Fig. 2.

The Fig. 2 in its correct form is as follows:

Fig. 2 Biomass of three ectomycorrhizal fungi growing at six Cd concentrations. *Pisolithus tinctorius* (Pt1 and Pt2) isolated from unpolluted sites and *Scleroderma citrinum* (Sc) isolated from a mine residue polluted with Cd. Symbols with different letters

indicate a different biomass ($p \leq 0.05$) in each concentration (1–10 mg L⁻¹). There were no differences ($p > 0.05$) between fungi at concentrations from 0 to 0.5 mg L⁻¹. Bars represent the standard error ($n=5$)

The online version of the original article can be found at <http://dx.doi.org/10.1007/s12011-011-9267-7>.
