It is been a good year for the journal and we are looking forward to another great year in 2020, with a special issue from the XIth International Workshop on EPR in Biology and Medicine, held last October in Krakow, Poland. We intend to sponsor two additional special issues from symposia in 2020 that we hope you will find valuable.

What is most encouraging is that our 2018 impact factor jumped to 2.32 and we're optimistic about another increase when the 2019 figures are released. This was an increase from a five year average of 1.65 and goes to the credit of the new Editorial Board, the reviewers and especially the high quality submissions from readers like you.

In addition we're going to change the cover photo of the printed journal in the next issue, which is a modern

reflection of cell biochemistry and biophysics. Please look forward to seeing that issue in June of this year.

We again want to recognize the excellent reviewing by many experts in the field of cell biochemistry and biophysics; unfortunately, we cannot list their names due to proprietary issues.

The editorial board members have been phenomenal, including advising on the relevance and suitability of a newly submitted articles to reviewing and adjudicating conflicting opinions on articles under review. Their input is invaluable to maintaining and continuing the high quality standards that we strive to attain.

Publisher's note Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.
