The Editor-in-Chief has retracted this article [1]. Some concerns were raised after publication, and subsequent post publication peer review concluded that only a partial sequence of the AAP protein was used for bioinformatics analysis. As the amino acid binding domain of AAP was not completely covered in the truncated polypeptide the authors studied, the deduced structure has no biological significance. The Editor-in-Chief has invited the authors to submit a revised

manuscript which will undergo peer review. All authors agree to this retraction.
